

## Inspecting a full body harness

Inspect your harness before each use. Check the buckles, the webbing, and the D-rings. Check the manufacturer's label for additional user information.

If the harness is damaged or worn, do not wear it.

### Buckles

- Many full body harnesses have interlocking buckles called friction buckles. Look for bent, cracked, or nicked buckles. Test the buckles to make sure the coupling is secure.

### Webbing

- Look for frayed, cracked, cut, burned, or damaged webbing, and loose or broken stitching.

### D-rings

- Look for bent, cracked, nicked, or gouged rings.

### Manufacturer's label

- Inspect the manufacturer's label on the harness. The manufacturer's label on a CSA-approved full body harness will contain the following information:
  - Manufacturer or vendor identification
  - Size of harness
  - Date the harness was manufactured
  - Model number
